External Oak & Accoya Doorsets

Upgrade any Heritage external door to a 56mm doorset

Heritage external doorsets are manufactured to the customer's exact size requirements and are offered with a huge range of options. Supplied fully finished and ready to install with prefitted hinge and lock mechanisms.

Choose from any of our range of traditional or contemporary designs and we'll manufacture them as a complete doorset.* Even better your door will be upgraded to a 56mm thickness for a wonderful heavyweight feel and improved thermal performance. Traditional doors also feature mortice and tenon joints and 44mm thick raised and fielded panels.

We can supply your door frame with top and sidelights and each door comes as a complete doorset, hinged to its frame and prefitted with high quality German multipoint locking systems and your choice of door handle. Doors are fitted with superb double or triple glazed units in a huge range of glass options.

We offer our traditional doors in two timber options. European Oak is a timeless timber. Our oak doors are made from carefully laminated solid oak sections for beauty and stability. Where you need high weather or thermal performance we also offer most of our traditional doors in Accoya. This is a timber that has been modified for such incredible stability and duration that it features a 50 year guarantee.

Contemporary doors are made from high quality laminated slabs that are highly thermally efficient, fitted with reglazeable cassettes finished with stylish aluminium trims. Choose from a wide range of standard colours, or specify your own using our custom colour service.

Build your perfect door online using our unique Door Designer software to get an instant price and to order.

Online Design Software

Design your perfect doorset and order online

Heritage external doorsets are customisable in so many ways, from frame options to hardware choices, glass designs to door colours. There are over 5 million different combinations for you to choose from so that you can get your perfect new door.

To make the process of choosing your new door easier we have created a unique online Door Designer to allow you to configure your new door in minutes.

Choose from all of available options and see your new door develop as you pick your options. At each choice you make, pricing is updated so you can design a door that works for you and fits your budget.

Once you are happy with your design you can simply order your doorset online. Our design team will work through your order, processing your design through our CNC software, before sending you a detailed dimension drawing for you to approve prior to your door moving into manufacturing.

Once your doorset is complete, our shipping team will contact you to discuss a date for delivery that works for you. Each doorset is carefully packaged and shipped with detailed installation instructions.

High Specification as Standard for Doorsets

Quality components combined with CNC Manufacturing

Your new doorset is fitted as standard with high quality components.

- German multipoint locking systems fitted with antipick/antidrill Euro cylinder locks, supplied with 3 keys
- Automatic “slam shut” lock mechanisms with a “no lift” handle for a traditional feel when using the door
- Fully adjustable hinges and lock keeps for a perfect fit
- 24mm double or triple glazed units with WarmEdge spacer bars
- Aluminium low profile sill threshold with twin weather seals
- Chamfered door edge with drip groove and 18mm weather seal
- Multistage spray finish, UV cured with multiple sealing processes
- Doors made to BS633 standards with PAS24 compliant components

Why choose a doorset?

Superior Quality, Quicker Installation, Higher Security

Doorsets are a great method of installing an external door, particularly for custom sized doors. As well as a much quicker installation, quality is far higher as the majority of processes are carried out in a controlled factory environment.

As part of the manufacturing process, all of the hardware rebates are CNC machined into the door and frame for an accurate fit.

The door and frame are then sprayed prior to hardware and glass installation with a high specification finish including primers and end grain sealers. Spraying before hardware installation ensures that even hidden areas are finished, ensuring excellent weather protection.

Next all the main hardware is assembled to the door and frame. A high security multi point locking system is fitted along with adjustable hinges and keeps to allow for precise adjustment.

All weather seals are fitted into place before door glazing is installed using a factory approved method.

Your frame will be supplied either completely assembled with the door hinged, or in the case of larger frames with top or sidelights, the frame sections are machined to slot together accurately on site.

Choosing a Heritage doorset means you can install a custom sized timber door quickly and easily, knowing that the quality of the door is built in.

What timber to choose?

Options for any weather or thermal requirement

Oak is without doubt one of the most beautiful timbers you can buy. Solid oak external doors are a real statement of luxury and style. We supply all of our oak doorsets with a multistage spray finish which will protect them from the elements. However, as with all normal timbers, oak will require a good maintenance programme, and where your door would be in a particularly windy or wet location then we recommend you consider Accoya.

Accoya is a modified timber that is so highly resistant to any swelling or bowing that it is offered with a 50 year guarantee.

Accoya is also naturally insulating so for doorsets for new builds where Part L thermal efficiency regulations must be met, then Accoya can be a great choice. We can either stain your new Accoya door for a timber grained finish, or it is ideally suited to opaque colours.

If you choose a door from our Contemporary range, then your door will be made from a great quality timber composite slab. Thermally efficient and cross laminated to ensure stability, all of these doors will easily pass the requirements of Part L. Choose from a range of glass designs and colour options to have a door that really stands out.

High Quality Glazing Units

Security and high thermal performance

Heritage fits high quality UK sourced glazing units as standard to your new doorset. Choose from a wide range of designs, including custom sized options for any sidelights and toplights you may need in your frame.

Your glazing units come with toughened glass as standard, with the option to upgrade to our Security+ glass which features two panes of 3mm float glass and a 0.76mm pvb interlayer. This glass achieves BS EN 356 Class P2A – one class higher than the P1A needed for PAS24 compliance.

WarmEdge spacer bars are fitted to all glazing units as standard, with some units available with Pilkington K low emmessivity glass with argon fill. On average our glazing units achieve a U value of 1.5w/m2K, which exceeds the requirements for new build.

All door glazing units are factory fitted using an approved fully bedded system. Each unit is fitted with high security glazing tape on a full silicone bed. Internal solid timber glazing beads are fitted for extra security and these beads are cut from the same timber as your door to ensure a good colour match.

Sidelights and toplights are generally supplied unglazed for transport purposes but each doorset comes with all of the necessary security tape to quickly install these on site.

Door Hardware

High security multipoint locks as standard

Hardware is crucial to ensuring a secure door as well as good looks. Heritage fits only German sourced multipoint locking systems to our doorsets so that you can be sure that your home is properly protected.

For standard doors we offer 2 options of either a mid level handle or a high level nightlatch style lock. Both offer a traditional timber door appearance but hidden inside the door a full multipoint lock ensures the best security. Both systems feature automatic keywind locking with no need to lift the handle to engage the locks. Upon closing the door all 3 latches will automatically engage with the frame keep, with a turn of the key engaging a further deadbolt.

For stable doors, we fit another German multipoint system, which uses upper and lower locks that either lock the 2 sections together or allow the top leaf to open inwards independently. Once the door is locked 4 separate latches as well as a further deadbolt ensure complete security.

All of our multipoint locks are fitted with antipick and antidrill Euro lock cylinders and are supplied with 3 keys.

Where building regulations require we can supply door spy holes with wide angle lenses and security chains. In addition, for easy exit, any of the locks can be fitted with an optional internal thumbturn, with key operation to the outside only.

When we machine your door we can also add a letter box in your preferred finish with a choice of mid or lower positions depending on the door type.

Choose from our range of high quality door handles in either black or stainless steel style finishes to complete the look of your door.

Solid Colour Options

Factory Finishing

Professionally applied finishes in a controlled environment

Correct product design and manufacture is important when it comes to making a timber door that will perform satisfactorily in all weathers, however it is equally crucial that a high performance finishing system is applied.

Heritage offers a factory applied multistage finish that comes highly recommended. If you choose this option your door will go through a number of processes, including end grain sealing, primers and multiple top coats. Components such as glazing beads are sprayed seperately and areas such as glazing and lock rebates are coated for high protection levels.

The finish system uses industrial high thixotropic water based products that are applied using the latest high pressure spray equipment. We carefully measure each coat thickness to ensure a 70 micron dry thickness for each layer.

Each coat is cured in a catalytic Infrared drying booth fitted with a filtered air system to ensure the door receives a smooth finish.

The result is a beautiful smooth hardwearing surface coating that gives you the weather performance you need with the looks that you want.

Available Doorset Designs

Choose from a wide range of traditional or contemporary door designs. Traditional doors are available in either oak for a clear or stained finish or Accoya which is perfect for a solid colour. Many are available as a stable door.

Contemporary doors available in solid colours only.
