

Timeless elegance for your home

Welcome to the Heritage Collection...

In these pages we'd love to show you our beautiful range of solid timber doors and stair products and hopefully inspire you to see how the warmth of natural timber can enhance your home.

We also offer a wide range of exciting finishes to all of our products and we'd be delighted to organise samples and further information for you. Our team are always on hand to offer expert advice along with a friendly approach, honest quotes and leadtimes. As a UK manufacturer if you need one of our products sizing to suit your particular needs then we can often accommodate that. Give us a call and talk us through what you are looking for.

We are a family owned business, based near the Peak District and proud of our history as a UK manufacturer. We started making a few oak doors in the mid 90's, tired of the poor quality and materials of imported doors. From there our business has gone from strength to strength, adding doorsets and stair products along the way.

We believe in understanding our raw materials both from a quality and an environmental perspective. With this in mind, we take the time to work direct with sawmills in France and Sweden, to source the beautiful timber needed to make quality products. Every piece of oak or pine we buy goes through our PEFC certification system, so you can be sure your new products are sustainably produced.

We also want to make our products affordable for our customers, and so we invest in the very latest manufacturing technology, and combine it with that irreplaceable handmade touch to give you the best of both worlds. We'll gladly show you how we make our products if you choose to visit us.

We hope you enjoy the brochure, and find something to tempt you.

Pine Ledged Doors

A quality yet cost effective option for internal ledged doors

Softwood ledged doors can be a great choice if you are painting your doors or you are working to a strict budget. All of the same great options are available as with our oak ledged doors, from custom made sizes to stable and bifold door versions.

Just because Heritage pine ledged doors are a cost effective alternative to oak, don't think for a minute we've skimped on quality. All of our pine doors are made using the same glued, pinned and pressed construction as our oak doors. This creates a super strong door that does not require diagonal braces, although these are an option for aesthetics.

We use a quality grade of Scandinavian redwood, purchased solely from Northern mills where the cold climate makes for a slower grown more stable timber. We use wider and thicker boards than any other softwood door on the market, to make a door that is a full 40mm thick and looks great. Ledges are a generous 115mm wide and 20mm thick for a strong and good looking internal door.

When selecting your new softwood ledged doors, remember that we can also make your door to whatever size you need it. Most custom sized doors come under our fixed price scheme so you know from the outset what it will cost. You may be surprised to learn that they don't cost much more than our standard stock doors. We can also manufacture your custom doors in just a few days. They look much better than cutting a standard door to size as we reposition the ledges to suit the height of the door. We can also make them to larger than standard sizes.

Heritage pine ledged doors are available in the full range of options from stable doors to bi-fold doors, as well as doors with glass openings.

Pine V Grooved Ledged Doors

Softwood V Groove ledged doors are a great option whether you are painting your new ledged doors or just working to a strict budget.

We use a Vths grade Scandinavian pine sourced from northern sawmills to produce a great quality door at an outstanding price. Our doors feature extra wide 112mm verticals as well as substantial 115mm wide ledges for a sturdy, high quality internal door.

Widths	610/686/762/838mm or custom made
Height	1981mm or custom made
Thickness	40mm over the ledge
Timber	Solid redwood (pine) Vths
Options*	Bracing pack, custom sizes, beeswax or pewter door ironmongery set, glass openings, bifold, stable, 4 ledges

Door Construction & Bracing Packs

Traditionally softwood ledged doors have always had diagonal braces fitted, yet we make ours without them. Why is this?

Braces are fitted to cheaper softwood ledged doors because they need them to strengthen the door. These doors are made with thin boards that are only stapled together resulting in a very weak door. Heritage uses thicker & wider ledges in our doors. However the real difference is in how we assemble them.

Every door has its ledges glued to the uprights, before being pinned in place. Once this is done, the entire door is pressed at huge pressure to ensure the ledge is firmly in place and can never move. Its a much slower way to make a ledged door but the end result is a vastly stronger door. As a result, braces become a purely aesthetic choice.

Rustic Oak Ledged & Braced Doors

Super Rustic doors that are period correct...

Ledged and braced doors are a classic of period properties, found in all manner of homes from country cottages to barn conversions. Heritage is the UK's only major manufacturer of ledged and braced doors. All of our doors are made in our Sheffield factory to ensure you receive a quality product.

Rustic oak doors are designed to match the style of timber that would have been used in period to make this style of door. We keep all of the character that you find in rustic oak, from colour variation to minor splits and large knots. Anything that is a larger feature we will fill for you, however by default we leave the door unfilled to retain all of its natural charm. This door will not be for everyone, but for a period cottage, this is as original and rustic as it gets.

In order to keep prices low we may also fingerjoint the ledges on Rustic doors. We take lengths of solid oak and joint them using a super strong finger style of joint. Some colour variation may be seen but this can be blended by using coloured stain if necessary.

We offer a choice of either V Grooved or Bead and Butt profile boards which can make a big difference to how your door will look. Take a look at the pictures opposite to get an idea of how each style impacts the look of the door.

As standard your door will come with ledges only. Bracing packs can also be purchased to convert your door to the classic ledged and braced style, these are aesthetic only and the door will not sag without them. Bracings can be fitted in either orientation and are easy to install.

These doors usually go into older properties and often standard sizes simply won't fit. Whilst these doors can be trimmed to size, this often leaves the ledges too close to the top and bottom of the door. A far better option is to have a door custom made to suit whether smaller or larger than standard. The cost is not significantly extra and we can normally complete these in under a week.

Prefinishing

We can spray finish your doors in a either clear, light, medium or dark oak

Rustic V Grooved Ledged Doors

With a subtle look from the V grooved boards, this is a very popular oak ledged door. Made using heavily rustic French oak, these doors create a warm feel to your home.

Available in a range of standard sizes or custom made to suit your door opening in just 1 week. Add bracing packs and ironmongery to complete the look.

Widths	610/686/762/838mm or custom made
Height	1981mm or custom made
Thickness	40mm over the ledge
Timber	Solid rustic oak, splits, knots, filler and rough patches, fingerjoint ledges
Options	Bracing pack separate or fitted, custom sizes, beeswax or pewter door ironmongery set, inset ledges

Beeswax Hardware Set

Pewter Hardware Set

Rustic Bead & Butt Ledged Doors

Bead and butt ledged doors create a striking look. Moulded profile boards combine to create a style line between each vertical board.

Rustic doors will contain significant knots, some of them filled where daylight would otherwise show, some non structural splits and rough patches. They are exactly the grade of timber that would have been used in period doors but please be sure they suit you.

Widths	610/686/762/838mm or custom made
Height	1981mm or custom made
Thickness	40mm over the ledge
Timber	Solid rustic oak, splits, knots, filler and rough patches, fingerjoint ledges
Options	Bracing pack separate or fitted, custom sizes, beeswax or pewter door ironmongery set, inset ledges

V Groove Oak Ledged Doors

Select Rustic Oak Ledged & Braced Doors

Classical designs in a down to earth style...

Select rustic ledged doors take all the great features of our rustic ledged doors but significantly upgrade the timber used. These are by far our most popular door, as they offer a great balance with enough knots and features to create a rustic cottage feel but without the large features found in our normal rustic doors. Where we find a knot that shows daylight we will still use filler, but this is generally in a small area only.

Select Rustic doors come in a range of different types to suit all the varying needs of your home. Bifold doors come in two equal halves and we offer joining hinges as well as special shortened versions of our heavy duty strap hinges that will fit onto the master leaf.

We also offer the door as a stable door variant, which can be great to allow a visual path between 2 rooms whilst still creating a barrier for pets for example. We offer a version of the hardware packs that comes with 4 hinges. Shoot bolts are also available to lock the two halves together in matching beeswax finish.

We can also add glass openings to your door to allow light to flood in. We can glaze your door for you with a choice of clear or our Patterdale or Buttermere glass, or we can leave it for you to glaze yourself.

Finally if you want something that little bit special we can build your door with Abbey style ledges or an additional 4th ledge, a style popular in certain regions of the country.

Don't forget that we can also make any of these doors to any size you need, invaluable for those renovating period properties with unusual doorway sizes.

Prefinishing

We can spray finish your doors in a either clear, light, medium or dark oak

Select Rustic V Grooved Ledged Doors

Select Rustic V Groove doors are our most popular solid oak ledged door. They provide a great balance between their rustic nature and the subtlety of the V Groove profile.

Personalise your door with our range of options from hardware through to Abbey style ledges and don't forget we can make the door to whatever size you need.

Widths	610/686/762/838mm or custom made
Height	1981mm or custom made
Thickness	40mm over the ledge
Timber	Solid select rustic oak
Options*	Bracing pack separate or fitted, custom sizes, beeswax or pewter door ironmongery set, glass openings, bifold, stable, Abbey ledges, 4 ledges, inset ledges

Select Rustic Bead & Butt Ledged Doors

Bead and Butt ledged doors are rapidly gaining in popularity over the last few years and it's easy to see why with their distinctive good looks.

Order your door as a standard size and in most cases we can ship within 24 hours. Customised doors typically take around a week to produce but they can really take the hassle out of fitting the door.

Widths	610/686/762/838mm or custom made
Height	1981mm or custom made
Thickness	40mm over the ledge
Timber	Solid select rustic oak
Options*	Bracing pack separate or fitted, custom sizes, beeswax or pewter door ironmongery set, glass openings, bifold, stable, Abbey ledges, 4 ledges, inset ledges

*Not all options are available in all combinations. For example Abbey ledges are not compatible with the bracing pack. Please call if you are unsure about your preferred combination of options.

Prime Oak Ledged & Braced Doors

Clean smooth doors for a more modern feel...

All of our solid oak ledged doors are made using predominantly French oak from Southern Normandy and the Burgundy regions. We visit all of our supplier mills every year to carefully select which oak we buy to suit the nature and quality of our doors.

We are also proud of our environmental credentials. Every piece of oak we buy passes through our PEFC certification scheme.

With prime doors we take this one step further. Prime timber is carefully selected out to create a much cleaner looking door, which works well in contemporary settings. We look for timber which has a minimum of knots which allows the visual focus to be on the grain pattern.

Prime oak ledged doors also work wonderfully well in more contemporary settings with their cleaner look. As with our other solid oak ledged doors, prime doors are available in the full range of options, from bi-fold and stable variants, through to glass openings and Abbey style ledges.

We can also prefinish your new door in our spray facility in a choice of clear, light, medium or dark oak super matt finishes.

If you need it then our custom assembly team will also make the door to the exact size you need. We have made these doors in sizes ranging from tiny cupboard door versions through to super wide doors. As a UK manufacturer, this usually only takes around a week and isn't too expensive.

If you need a custom sized door then we encourage you to call our friendly sales team who will chat through your requirements with you and guide you through what is possible.

Prefinishing

We can spray finish your doors in a either clear, light, medium or dark oak

Prime V Grooved Ledge Doors

Prime V Groove Ledge doors give you the ultimate in sleek and subtle looks. With super smooth timber with very few knots, and the simple appeal of the V Groove boards, this door fits well into more modern settings.

Choose from standard sizes off the shelf, or we'll custom make your door just how you want it in around a week.

Widths	610/686/762/838mm or custom made
Height	1981mm or custom made
Thickness	40mm over the ledge
Timber	Selected Prime oak, occasional knots and colour variation
Options	Bracing pack separate or fitted, custom sizes, beeswax or pewter door ironmongery set, glass openings, bifold, stable, Abbey ledges, 4 ledges, inset ledges

Prime Bead & Butt Ledge Doors

Prime Bead & Butt doors are a recent introduction and add that extra little touch of individuality with their profiled boards.

Team the doors with one of our stunning finishes detailed on pages 21-29 to create an exceptional quality oak door that will look superb and last for generations to come.

Widths	610/686/762/838mm or custom made
Height	1981mm or custom made
Thickness	40mm over the ledge
Timber	Selected Prime oak, occasional knots and colour variation
Options	Bracing pack separate or fitted, custom sizes, beeswax or pewter door ironmongery set, glass openings, bifold, stable, Abbey ledges, 4 ledges, inset ledges

V Grooved & Bead & Butt Board Profiles

V Grooved

Bead & Butt

A major option available in all of our solid oak ledge doors is whether you choose V Groove or Bead & Butt profile vertical boards. This refers to the moulded edge we machine into each board, which when two boards are assembled together creates a particular profile. Each board is assembled in a specific way to ensure the door is resistant to warping and to create the classic looks of each profile.

V Groove doors tend to give a subtle and clean look to the door and work particularly well in period cottages or barn conversions.

Bead & Butt profile doors add some extra detail and would often have been used in larger properties reflecting the additional work that would have gone into making them at that time.

With modern machining techniques we can produce either board in the same time, and so we do not charge a premium for either profile. We prefer this as it leaves you free to choose which board you feel best suits your project.

Door Hardware

Hand forged ironmongery to showcase your doors...

When you have taken the decision to install solid oak doors, then ironmongery with a quality feel really sets off your new doors. It's also worth remembering that solid oak doors are much heavier than normal doors, and hardware built to take that weight is a wise investment.

We offer a range of handforged ironmongery, in both antique beeswax and pewter finishes. Our hinges are especially designed to deal with the weight of the doors and not sag. Each piece is handmade and unique, and will add that quality touch your new solid oak doors deserve.

Beeswax & Pewter Hardware

Choose from antique beeswax or pewter finishes, with a range of hardware to suit all requirements when installing your new Heritage Collection solid oak doors.

Beeswax and Pewter sets are ideal for ledged door installation and come with everything you need from hinges and thumb latch to matching fixing screws.

Item	Description

Oak Skirting & Flooring Mouldings

The perfect finishing touches to your flooring...

With a new oak floor installation those finishing touches can make the difference in the final look of your project. We manufacture a range of products to help you achieve that perfect finish.

Oak skirting is available in fixed 3.2m lengths, in a choice of 2 heights. Skirting is double moulded so you get a choice of two profiles, with the other profile being hidden against the wall. Our skirting is trimmed to length so you get no end splits and you can use the full 3.2m.

We manufacture a range of flooring trims, from doorway thresholds through to ramps for connecting oak flooring to other floors at different heights. All in the luxurious finish of solid oak.

Item	Description
OAKSKIRT115CT	Oak Skirting 3.2m x 115mm, 20mm Chamfer/Torus
OAKSKIRT115CB	Oak Skirting 3.2m x 115mm, 20mm Chamfer/Bullnose
OAKSKIRT142CT	Oak Skirting 3.2m x 142mm, 20mm Chamfer/Torus
OAKSKIRT142CT	Oak Skirting 3.2m x 142mm, 20mm Chamfer/Bullnose
HDFJT1	Oak Door Threshold - 985 x 18 x 37

HDFET2	Oak End Trim for 20mm flooring - 985mm
HDFET3	Oak Ramp for 15mm flooring - 985mm
HDFET4	Oak Ramp for 20mm flooring - 985mm
HDFSR1	Oak Semi-Ramp for 15mm flooring to tiling - 985mm
HDFSR2	Oak Semi-Ramp for 20mm flooring to tiling - 985mm

Pine & Oak Framed, Ledged & Braced Doors

Heavyweight doors with period charm...

Framed Ledged doors are a superb heavyweight door that are a common feature in period homes. Bridging the gap between ledged doors and more intricate panelled doors, Framed Ledged doors are a great choice for a quality look and feel in a style that adds unpretentious charm to your home.

Framed ledged doors are made by creating a sturdy frame, into which a choice of either V Groove or Bead & Butt vertical panels are added. The 40mm thick outer frame gives the door an extremely sturdy and heavyweight feel.

Heritage completes every stage of the manufacture of our framed ledged doors. Starting with either sawn pine or oak, we plane all of the components to size before laminating 2 sections together for the frame, which gives even more strength to the door. The outer frame is assembled in a state of the art hydraulic press but using twin 16mm dowel joints which are one of the very strongest methods.

Each door is carefully sanded and then the inner panel is added into place to complete the door. As we make the doors ourselves, custom sized doors are not a problem to supply and in most cases we can complete your custom order in around a week.

To make your door really stand out, we can also prefinish the door for you. If you choose this option your doors will go through a superb multistage finishing process in our brand new spray and UV curing facility to create a very high quality finish that makes the beauty of the door stand out.

Choose Framed Ledged doors to add a feeling of real quality to your home.

We can spray finish your doors in a either clear, medium or dark oak or solid colours

V Grooved Framed Ledged Doors

Framed Ledged doors using V Groove inner boards create a subtle look in a door that exudes quality. The V Grooves create strong vertical lines, adding visual height to your room.

Add in the optional bracing pack to for extra visual impact, creating that traditional framed, ledged and braced style of door.

Widths	610/686/762/838mm or custom made
Height	1981mm or custom made
Thickness	40mm
Timber	Solid select rustic oak, or knotty pine. Frames laminated from 2 x 20mm solid sections
Options	Bracing pack, stable door version, custom sizes, glass openings

Bead & Butt Framed Ledged Doors

Choose Bead & Butt vertical inner boards for a really striking look. The moulded profile on the edge of each board draws the eye to the door, visually separating each panel and highlighting the fabulous solid oak natural look of the timber.

We can prefinish any of our oak ledged doors in clear, light, medium or dark oak in our modern spray facility for a high quality finish. Pine can be painted in clear or any solid colour.

Widths	610/686/762/838mm or custom made
Height	1981mm or custom made
Thickness	40mm
Timber	Solid select rustic oak, or knotty pine. Frames laminated from 2 x 20mm solid sections
Options	Bracing pack, stable door version, custom sizes, glass openings

Custom Size Engineered Oak Doors

The ideal problem solver

Standard engineered oak doors are a great solution at an attractive price, but they also come with a real downside. They cannot be trimmed more than a few mm and so any unusual sizes are normally a real problem. Custom sizes are regularly offered but are ordered from the Far East on typically 16-20 week leadtimes.

Heritage has invested in state of the art robotised production in order to be able to manufacture custom sized engineered doors at our UK factory. Leadtimes are typically around 1 week and prices are fixed so you can order online without waiting for a quote.

Many of the common styles are available, and we can also usually match up the major components sizes so that your new custom engineered door is a good visual match for existing doors.

Doors are supplied in a 35mm thickness and to any width and height up to 950mm wide by 2160mm high. To make your life easier, door prices are fixed with size brackets so that you do not have to wait for a quote. Some of the styles are even available in micro sizes, ideal for cupboard doors.

The doors feature a real oak veneer over a hardwood core. Doors with slab style centre panels feature cross laminations to ensure stability. Twin 16mm dowels with scribed joints create a strong frame.

We have a dedicated custom door team. For your peace of mind, with every order you will receive a dimensioned drawing from our CNC system to sign off prior to production commencing.

Prefinishing

We can spray finish your doors in a either clear, medium or dark oak or solid colours

Shaped Internal Engineered Doors

Not only can Heritage produce custom sizes in engineered oak doors, but uniquely we can also produce custom shapes in most engineered door styles. We will also produce these doors for a fixed price, based around the same size brackets, so you don't need to wait for a quote.

The most common shape we sell is a fully or part angled head for use for understairs cupboards or unusual doors where the roofline creates an angled corner. If you are creating an opening, consider a part angled head as this will hinge much better.

Simply let us have the basic dimensions and we'll do the rest. You will receive a fully dimensioned drawing to sign off prior to manufacture.

Matching Existing Doors

Standard engineered doors are imported by a large number of companies and design details can vary. The most common difference is in the width of rails and stiles for example. If you are matching into existing doors we can usually produce your door with matching stile and rail widths. For Mexicano style doors we can often also match groove dimensions.

We keep the measurements of many of these doors on file if you know the manufacturer, or we can work from dimensions supplied by you.

Custom Doors

If you'd like something unusual or unique to you, then get in touch. We use CNC and laser cutting machinery which has the capacity to be very flexible when manufacturing one off designs.

We can add logos and text to your doors, whether on a separate timber sign or in some cases directly laser etched into the door itself.

External Doors

Pick from standard designs or we'll make a design to suit you

Heritage manufactures external doors and complete doorsets to a wide range of designs made to your exact sizes. If you want something unusual or need an existing style copying, then we can usually help. All our external doors are manufactured on the latest 5 axis CNC machinery.

Doors can be supplied in any stage from unfinished/unglazed right through to fully finished and with all hardware premachined. We can also produce doorsets including sidelights and toplights. Glass can be chosen from a range of styles including having us custom etch to your design. Doorsets designed to meet Part L regulations are available.

Please ask for our External Door & Doorsets brochure or download online.

Optional Multipoint Locking Systems

Stable Mexicano, Glazed Upper Leaf with Astragal Glazing Bars

Oak Mouldings

Quality oak mouldings for a range of projects...

Heritage manufactures and stocks a range of oak mouldings ideally suited for DIY construction projects. Available in a range of widths and styles these mouldings are an ideal way to complete your DIY project with materials that match into our other products.

Oak PSE

20mm thick oak PSE in fixed 2.4m lengths. Manufactured from a selected grade of French oak with minimal knots. Available in a range of widths.

Heritage can manufacture custom oak veneer shelves up to 2m long x 450mm wide. Oak veneer over particleboard core with solid oak edgings. Available in square or bullnose edge to 3 edges

Solid Oak PSE

Oak Veneer Window Board

Solid Oak Radiator Shelving

Luxury stylish storage...

Radiator shelves are an ideal way to add storage to an otherwise unused area, and have the added bonus of helping to deflect heat out into the room where its needed.

Our shelving kits are made using prime grade oak and are a solid 20mm thick. Each kit comes complete with everything you need to install it, brackets and screws. Better yet, the brackets use the radiator itself for support meaning you don't need to drill any holes in the wall. The shelves are carefully prefinished in a clear satin quality hardwax oil.

Kits are available in 5 popular lengths to suit most sizes of radiator commonly found in homes and are easily fitted in just a few minutes.

Why not add some stylish storage to your home with the luxury of oak radiator shelving?

Radiator Shelving

Radiator shelves are available in 5 popular lengths covering most UK radiator sizes.

Each kit comes complete with brackets and screws (longer shelves have more brackets) along with detailed installation instructions. Shelves are available either unfinished or in clear satin.

Oak Stair Cladding

Transform your staircase...

Oak stairs are hugely popular, with the natural subtle tones of oak treads adding a real wow factor to your home. However most newer homes are fitted with softwood or MDF stairs, and the cost and mess involved in replacing them can be offputting.

Heritage oak stair cladding offers you a simple cost effective solution. By retaining your existing stairs, and bonding new oak treads and risers over the top, converting your staircase to solid oak becomes an easy weekend DIY job and better yet the cost is usually around ¼ that of a new oak staircase.

Some customers choose to clad just the treads and risers, painting the string white, but for those wanting the full effect we also offer a pre-glued oak string veneer which is easily cut to size with scissors and ironed on to the existing strings.

The system is flexible enough to clad almost any stair configuration, with each shape of tread featuring a corresponding tread pack, even down to the curved bullnose steps often found at the bottom of staircases.

Oak Stair Cladding

Heritage oak stair cladding comprises a simple system of tread packs. For each shape of tread on your staircase, choose a corresponding tread pack. Each tread pack comes complete with a riser. The system will deal with staircases up to 1m wide, the vast majority of UK domestic stairs. For the less common quarter space landing, choose a straight tread pack, and add extension boards to the pack to make up the depth you need.

Each pack is trimmed to width and depth, and bonded into place with a special permanently flexible adhesive that keeps the treads secure and prevents warping. Each pack comes with comprehensive installation instructions. If you aren't sure what you need, give our sales office a call and we'll work out a parts list for you.

Item	Description
HDFTPO	Straight Tread Pack, 1000mm wide
HDFWTO	Winder Tread Pack, 1220mm wide
HDFBTO	Bullnose Tread Pack 1220mm wide
HDFOB10	Extension Pack 1000mm wide x 142mm deep
